Article

TranS1, Inc. opened its new corporate headquarters on March 30 in Wilmington, North Carolina.

One of the state's U.S. Senators, Republican Richard Burr was on hand to cut the ribbon.

The new quarters are located at 301 Government Center Drive and occupy 32,000 square feet of research and development, training, marketing, regulatory and customer service activities.

Senator Burr and Wilmington Mayor Bill Saffo both participated in the ribbon-cutting ceremony. According to a company press release, Senator Burr addressed the media and TranS1 employees on the status of health care reform and the importance of cutting-edge companies like TranS1 to both the local and state economy. Senator Burr expressed his vision that TranS1 will be an important component of a technology corridor along I40 linking the southeastern coast of North Carolina to the Raleigh-Durham area.

Company CEO Rick Randall praised Senator Burr for his strong support of the medical device industry, specifically his opposition to last year's proposed \$40 billion tax on medical device companies that has been cut in half. Randall said the original proposed tax would have impeded innovation, medical device entrepreneurship and the future availability of innovative medical technologies that benefit patients.

TranS1 currently markets the AxiaLIF portfolio of products for single and multilevel lumbar fusion and the Vectre and Avatar posterior fixation systems for lumbar fixation supplemental to AxiaLIF fusion. The company, which was founded in 2000, has experienced reimbursement challenges for its device. Opening a new headquarters looks like a sign that the company is confident of resolving those issues.
